

Case Study – Over work station access platform

Background

Gone are the days where you can use a work station or a desk as a platform to gain access to services to maintain lighting or air-conditioning. Our client Entire Fire needed to access the ceiling panels over work stations and contacted our office for assistance.

Challenge

Entire Fire required a product that could

- span over the work station
- stable enough to accommodate the technician's weight
- compact enough to relocate from site to site, through goods lifts and through narrow corridors.

Solution

We worked in partnership with Entire Fire to deliver a solution that was:

- Compact – narrow width and removable handrails
- Easy to use
- Compliant
- Strong
- Safe
